

# SonicWall Switch

High-speed Network Switching for Business Connectivity

The SonicWall Switch delivers high-speed network switching while providing unparalleled performance and manageability through SonicWall firewalls or Wireless Network Manager. It features a unified security posture, high port density, Power over Ethernet (PoE) options, and gigabit or 10 gigabit performance capabilities. New capabilities such as SNMP monitoring and backup and restore of Switch configurations make it ideal for small- and medium-sized businesses (SMB) and Software-Defined Branch (SD-Branch) deployments. This enables businesses - big or small - to accelerate digital transformation and keep pace with the changing network and security landscape.

**View full specs »** 

#### **HIGHLIGHTS**

- SD-Branch ready
- · Firewall and WNM managed
- SNMP monitoring
- · Backup and restore Switch configurations
- Zero-Touch Deployment
- · Unified security posture
- · Layer 2 switching
- · 10 gigabit or 1 gigabit support
- 8/10/24/48 port models
- Various PoE options
- QoS support
- · Segmentation and compliance
- Compact form factor
- · Energy-efficient design

Find the right SonicWall solution for your small business and branch deployments:

sonicwall.com/switch

The SonicWall Secure SD-Branch solution transforms user experience at branch office locations by delivering a unified platform that enables branches to be deployed in minutes. It delivers unified visibility and threat detection from a single pane of glass. SonicWall SD-Branch components consist of SonicWall next-generation firewalls with Secure SD-WAN, Capture Security Center with Zero-Touch Deployment, SonicWall Switches, SonicWave access points (AP), Capture Client and Cloud App Security. With the flexibility that SonicWall Secure SD-Branch offers, organizations can now be more agile, open and cloud-centric.

An integral part of the next-generation branch transformation, the SonicWall Switches are managed via firewalls or Wireless Network Manager (WNM) for unified, single-pane-of-glass management. Not all features available on the standalone switch UI will be available from the Firewall or WNM Management solution. Refer to the Firewall and WNM documentation for supported features. By tightly integrating with SonicWall firewalls and SonicWave Access Points, the solution benefits from a unified security posture and offers an end-to-end security solution that simplifies deployment, management and troubleshooting. This ensures seamless security and eliminates gap in the security posture that may arise with third party switches.

In conjunction, the SonicWall Switch offers Zero-Touch Deployment capability with the ability to quickly roll out devices across branches spread out globally. Admins can quickly and securely deploy these switches at new locations without requiring costly on-site IT personnel.

#### **PARTNER-ENABLED SERVICES -**

Need help to plan, deploy or optimize your SonicWall solution? SonicWall Advanced Services Partners are trained to provide you with world-class professional services. Learn more at:

#### www.sonicwall.com/PES

Packed with features, these switches are available in a compact form factor with an energy-efficient design. Available in seven models, ranging from 8 to 48 ports, with gigabit and 10 gigabit Ethernet ports, the switches work seamlessly with SonicWall next-generation firewalls and SonicWave APs to create a high performance secure network. The Ethernet ports provide PoE options to power on various devices such as APs, VOIP phones and IP cameras.

Organizations can prioritize certain traffic on the network such as VOIP for video conferences while working from home, with features such as QoS. Devices can be easily segmented in the network to maintain compliance.

Segregating can be accomplished by creating policies or VLANs. Features such as 802.1X authentication allow businesses to maintain PCI compliance.

#### **Switch Series Features - Across All Models**

#### **Management and Configuration**

- Manage through Capture Security Center via Network Security Manager (NSM) or Wireless Network manager (WNM)\*
- SNMP monitoring
- Backup and restore
   Switch configurations
- · Switch auto-discovery
- Daisy chaining via firewalls
- Software upgrade of Switches (from firewall) or Wireless Network Manager
- · Centralized VLAN configuration
- Static/Dynamic LAG
- STP
- LLDP/MED
- · Static routing
- IPv4 management
- SSH
- Firewall management, standard CLI and web GUI interface
- Software upgrade/downgrade via TFTP/firewall/GUI
- IPv6 support

- Security and Visibility
- 802.1x authentication
- · Syslog collection
- IP/MAC ACL
- ACL
- IEEE 802.1x authentication port-based
- IEEE 802.1x guest and fallback VLAN

## Firewall Features Enforced on Management Firewall

• IPS, GAV, Application Control, Botnet

#### Layer 2

- Jumbo frames
- Auto-negotiation for port speed and duplex
- MDI/MDIX auto-crossover
- · MAC bridging/STP
- Rapid Spanning Tree Protocol (RSTP)
- Multiple Spanning Tree Protocol (MSTP)
- VLAN tagging

- Guest VLAN and voice VLAN
- Unicast/Multicast traffic balance over trunking port
- · Flow control and back-pressure
- 10Base-T
- 100Base-TX
- 1000Base-SX/LX
- 1000Base-T
- Gigabit ethernet support
- 10 gigabit ethernet (available on 24 and 48-port models only)
- CSMA/CD access method and physical layer specifications
- Storm control
- MAC, IP, ethertype-based VLANs

#### **Quality of Service**

- IEEE 802.1p based priority queuing
- IP TOS/DSCP based priority queuing

SonicWall Switch Series

#### **About SonicWall**

SonicWall delivers Boundless Cybersecurity for the hyper-distributed era and a work reality where everyone is remote, mobile and unsecure. By knowing the unknown, providing real-time visibility and enabling breakthrough economics, SonicWall closes the cybersecurity business gap for enterprises, governments and SMBs worldwide. For more information, visit <a href="https://www.sonicwall.com">www.sonicwall.com</a>.
